

SUCKERS for your feeder **Great value and the finest quality**

To maximise the speed of your feeder and reduce miss feeding our new range of suckers have been developed to the highest O.E. specification.

Our special bellow design reduces the air loss during lifting the sheet from the pile. They maintain grip whilst the sheet is being forwarded to the feed table this keeps the sheet square before entering the side lay of the machine thus reducing miss feeding.

The suckers are made from a durable rubber that can achieve maximum life even feeding the most challenging substrates.

Please ask our team for further information.
