

**C&T Matrix is pleased to offer a new plastic pallet to customers, designed with the specific demands of the packaging industry in mind.**

Customers specific hygiene and BRC accreditation requirements have been accounted for by exclusively using polymers that are food safe in the plastic pallets.

The new pallets are easy for manual handling, with a lightweight construction that will not splinter or cause damage within a working environment. Additionally, they are very easy to keep clean – simply wipe away dust or spray powder. These features make the pallets excellent in terms of health and safety requirements.

C&T's pallets can be used throughout the whole production process. Printing and die cutting can benefit from 'non-stop' feeding of the board/paper/corrugated using swords on the feeder. A variety of sizes of pallet are available to suit different customers' production formats.
